

CONNECTED CARE OPERATIONS

Connect care. Protect revenue. Strengthen clinical coverage.

One operating partner for health monitoring, RCM, and U.S. nurse staffing.

The questions clinic owners should be asking.

PrimeVital pairs practical operating workflows with experienced people and accountable handoffs. Start with the pressure you need to solve - then build a model that works in practice.

01 REVENUE CYCLE

Are denials above 10%? Is A/R aging beyond 30 days?

Experienced RCM operations and human QA help focus the right claims, denials, and follow-up actions first - with clear ownership at every handoff.

02 HEALTH MONITORING

Do patient readings become action - or simply another alert queue?

We connect technology, coordinated outreach, and closed-loop documentation so meaningful signals reach the right person without adding unnecessary burden.

03 U.S. NURSE STAFFING

Do vacancies disrupt continuity of care? Do you need nurses who understand the workflow?

PrimeVital provides U.S.-based RN/LVN coverage with credential-aware coordination and workflow alignment - not simply a shift to fill.

THE PRIMEVITAL OPERATING MODEL

Clear priorities + human oversight + accountable handoffs

Technology should create focus. People should close the loop. Every action should have an owner.

Let's identify the pressure worth solving first.
